

2.1 Core Framework: The Twelve Principle-Based Modifiers

Use this reference table whenever you translate a Chapter 1 diagnosis into a prompt correction. Each modifier targets a specific structural parameter within one of the five diagnostic dimensions. Select the modifiers that match your failing dimensions, write the constraint in measurable language, and stack them in your prompt.

2.1.1 Cadence Modifiers

Modifier	What It Controls	Example Constraint Language
Rhythm Lock	The sentence-beat pattern (fragment-to-controlled-sentence ratio)	"Alternate between two-word fragments and twelve-word controlled sentences. Never produce two consecutive sentences of the same length."
Pacing Constraint	How quickly speech accelerates or decelerates during a conversation	"Speech accelerates by 20% when the character feels cornered. Slows to half-speed when delivering a final verdict."
Interruption Protocol	When and how the character cuts off other speakers	"Interrupts mid-sentence whenever the other speaker uses the word 'sorry.' Does not wait for the sentence to finish."

2.1.2 Vocabulary Range Modifiers

Modifier	What It Controls	Example Constraint Language
Ceiling Cap	Maximum word complexity the character will use	"Restrict all word choices to monosyllabic or two-syllable words. No abstract nouns. No softening qualifiers."
Floor Mandate	Minimum register the character will drop to	"Maintain technical precision. No slang. No contractions. Every term must be the exact specification."
Domain Lock	The semantic field the character draws from	"Vocabulary restricted to domestic, tactile language. No corporate jargon. No academic phrasing."

2.1.3 Sentence-Length Variance Modifiers

Modifier	What It Controls	Example Constraint Language
Variance Band	Absolute minimum and maximum sentence length	"No sentence shorter than two words. No sentence longer than twenty words. All sentences must fall within this band."
Distribution Rule	How different lengths alternate within a speech block	"Alternate between 2–4 word bursts and one longer controlled sentence (15–20 words). No two consecutive sentences may share the same length."

2.1.4 Emotional Register Modifiers

Modifier	What It Controls	Example Constraint Language
Baseline Temperature	Default emotional output level	"Cold and controlled. Irritation surfaces only through clipped syntax and physical action beats. No warm or collaborative language."
Leakage Rate	How much true feeling bleeds through the defensive surface per exchange	"One microexpression of vulnerability per exchange, immediately suppressed. The character says 'it's fine' while the reader feels it is not."

2.1.5 Conversational Rhythm Modifiers

Modifier	What It Controls	Example Constraint Language
Turn-Taking Style	Whether the character waits, interrupts, deflects, or monologues	"Interrupts. Deflects questions with counter-questions. Shuts down the exchange before the other character finishes."
Exit Pattern	How the character ends their contributions to an exchange	"Trails off midsentence. Walks away before the other speaker can respond. Never says goodbye."
