

2.4 AI Prompt Template: Stacked Modifier Template

Use this template every time you generate dialogue for a character whose voice keeps flattening. Replace every bracketed field with the specific findings from your Chapter 1 Voice Bleed Audit. Stack two or three modifiers targeting the dimensions that scored "Moderate" or "Severe" in your audit.

Copy the prompt below into your AI tool. Fill in every bracket before generating.

Write dialogue for [CHARACTER_NAME] in the following scene:
[BRIEF_SCENE_DESCRIPTION_IN_1_TO_2_SENTENCES].

Apply these linguistic constraints simultaneously:

Cadence – [MODIFIER_NAME, e.g., Rhythm Lock]: [SPECIFIC_CONSTRAINT — e.g., "Alternate between 2–4 word fragments and one controlled sentence of 12–15 words. Never produce two consecutive sentences of the same length."]

Vocabulary Range – [MODIFIER_NAME, e.g., Ceiling Cap]: [SPECIFIC_CONSTRAINT — e.g., "Restrict all word choices to monosyllabic or two-syllable words. No abstract nouns. No softening qualifiers."]

Emotional Register – [MODIFIER_NAME, e.g., Baseline Temperature]:
[SPECIFIC_CONSTRAINT — e.g., "Cold and controlled. Irritation surfaces only through clipped syntax and physical action beats. No warm or collaborative language."]

Do NOT use polite transitional phrases. Do NOT resolve emotional tension within the exchange.

Post-Generation Rule: Right after you finish, do the Ninety-Second Voice Verification Read from section 2.5. If one part of the voice feels a little off, change only that one constraint line and generate again. All the other settings in your stack stay the same.
