

3.5 AI Stress-Test Prompts

Run these three prompts after completing your profile. They reveal gaps, vagueness, and missed dimensions before you commit the profile to the Dialogue Matrix in Chapter 4. Allow ten minutes total for all three prompts.

3.5.1 AI Prompt Template: Emotional Specificity Test

Purpose: Checks whether your profile contains enough granular detail to produce emotionally precise dialogue.

Copy the prompt below into your AI tool. Fill in the bracket before generating.

Based on the following psychological profile, generate three sample lines of dialogue this character would say when they are trying to hide that they are hurt.

[PASTE_YOUR_FULL_SEVEN_LAYER_PROFILE_HERE]

Output Diagnosis Worksheet:

Question	Your Assessment
Do the three lines sound like this specific character, or could they belong to anyone?	[Specific / Generic]
If generic, which layer feels thinnest? (Surface Mannerisms / Communication History / Defense Mechanisms / Triggers / Core Wound / Aspirational Image / Contradictions)	[LAYER_NAME]
What one specific detail could I add to that layer to sharpen the output?	[YOUR_ADDITION]

3.5.2 AI Prompt Template: Relational Range Test

Purpose: Checks whether your relational triggers and defense mechanisms produce distinct conversational behavior across relationship types.

Copy the prompt below into your AI tool. Fill in the bracket before generating.

Based on the following psychological profile, write three short dialogue snippets (2–3 lines each) for this character:

- 1. Speaking to their love interest during a moment of vulnerability.
- 2. Speaking to their best friend during a casual, low-stakes conversation.
- 3. Speaking to their antagonist during a confrontation.

Show how the character's speech shifts across these three contexts.

[PASTE_YOUR_FULL_SEVEN_LAYER_PROFILE_HERE]

Relational Differentiation Check:

Context	Did the voice shift?	What specifically changed? (cadence, vocabulary, register, rhythm)	Adjustment needed?
Love interest	[Yes / No]	[DESCRIBE_THE_SHIFT]	[IF_NO_WHAT_TO_ADD]
Best friend	[Yes / No]	[DESCRIBE_THE_SHIFT]	[IF_NO_WHAT_TO_ADD]
Antagonist	[Yes / No]	[DESCRIBE_THE_SHIFT]	[IF_NO_WHAT_TO_ADD]

If any row reads "No," return to Layer Four (Relational Triggers) or Layer Three (Defense Mechanisms) and add a conditional rule specific to that relationship type.

3.5.3 AI Prompt Template: Contradiction Crack Test

Purpose: Tests Layer Seven directly. Checks whether the AI can produce a convincing crack in the character's mask.

Copy the prompt below into your AI tool. Fill in the bracket before generating.

Based on the following psychological profile, generate a short scene (4–6 lines of dialogue) where this character's aspirational self-image cracks under pressure. Show the contradiction emerging in their speech—the moment the mask fails and something raw slips through.

[PASTE_YOUR_FULL_SEVEN_LAYER_PROFILE_HERE]

Contradiction Quality Check:

Question	Your Assessment
Can I clearly hear the mask in the first half of the output?	[Yes / No]
Can I clearly hear the mask breaking in the second half?	[Yes / No]
Does the linguistic shift match what I documented in Layer Seven?	[Yes / No]
If the crack feels unconvincing, what specific detail is missing from my Layer Seven entry?	[YOUR_NOTE]

3.5.4 Stress-Test Summary Log

Character: [CHARACTER_NAME]

Date: [DATE]

Prompt	Result	Adjustment Made	Profile Layer Updated
Emotional Specificity	[Passed / Needed revision]	[E.G., "Added two more surface mannerisms to Layer One"]	[LAYER_#]
Relational Range	[Passed / Needed revision]	[E.G., "Added a conditional trigger for antagonist scenes in Layer Four"]	[LAYER_#]
Contradiction Crack	[Passed / Needed revision]	[E.G., "Sharpened the linguistic inversion in Layer Seven; named the exact words that vanish"]	[LAYER_#]

For two-character profiling, use the combined tracker below:

Prompt	Hero Result	Hero Adjustment	Heroine Result	Heroine Adjustment
Emotional Specificity	[Passed / Revised]	[ADJUSTMENT]	[Passed / Revised]	[ADJUSTMENT]
Relational Range	[Passed / Revised]	[ADJUSTMENT]	[Passed / Revised]	[ADJUSTMENT]
Contradiction Crack	[Passed / Revised]	[ADJUSTMENT]	[Passed / Revised]	[ADJUSTMENT]

When all six boxes read "Passed," your profiles are ready for Chapter 4. If any box reads "Revised," fix that one item, run the prompt again, and make sure the voice now sounds correct. One round of fixes per prompt is usually enough, and two rounds should be the most you need. Once the voice sounds right, keep going.
