

4.1 Core Framework: The Six Fields of the Dialogue Matrix

The Dialogue Matrix is a structured document with six mandatory fields. Each field translates psychological data from your Chapter 3 profile into a concrete linguistic constraint the AI can execute. Use this reference to understand what each field governs before you begin populating it.

Field	What It Governs	What It Prevents
Cadence Signature	Rhythm and pacing of speech; the ratio of short bursts to longer controlled sentences	Metronomic uniformity where every sentence lands at the same tempo
Vocabulary Ceiling	Upper and lower bounds of word choices; maximum complexity and minimum register	Drift into the AI's polite mid-range lexicon where every character sounds the same
Sentence Architecture	Length variance, fragment-to-completion ratio, tendency toward questions vs. declarations vs. trailing	Twelve-word monotony where every sentence stretches to identical length
Emotional Default	Baseline emotional temperature and expressiveness level; the rate at which feeling leaks through	Default warm, courteous neutrality where everyone sounds mildly delighted
Conversational Rhythm	How the character enters, sustains, and exits exchanges; interruption patterns and exit strategies	Orderly, wait-your-turn dialogue where every character lets the other finish
Signature Tics	Small, idiosyncratic verbal behaviors that make the voice feel inhabited	Generic, performed dialogue that could belong to any character
