

6.6 The Three-Scene Verification Workflow

6.6.1 Action Plan

1. **Select** three types of scenes that show different emotional tones: one with high tension, one that feels tender, and one that is light.
2. **Generate** six to eight lines of dialogue for each scene using your adjusted filter.
3. **Check** each set of dialogue against the five-question Reader Expectation Alignment checklist.
4. **Adjust** any failing setting by one step, then regenerate and check again.
5. **Confirm** that all three scenes fit within the target range for your genre.
6. **Lock** your settings and move forward.

Recommended testing combination:

- **High-Tension:** Dark Moment or Misunderstanding
- **Tender:** First Kiss or Intimate Vulnerability
- **Light:** Meet-Cute or Banter-Heavy Montage

6.6.2 Three-Scene Verification Tracker

Character: [CHARACTER_NAME]

Subgenre: [YOUR_SUBGENRE]

Date: [DATE]

Scene Slot	Scene Type Selected	Emotional Register	Generated?	Passed Checklist?	Adjustment Made
High-Tension	[E.G., Dark Moment]	[E.G., Peak intensity, heavy subtext]	[Yes / No]	[Yes / No]	[IF_YES_WHAT_CHANGED]
Tender	[E.G., First Kiss]	[E.G., Moderate-to-high intensity, medium subtext]	[Yes / No]	[Yes / No]	[IF_YES_WHAT_CHANGED]

Scene Slot	Scene Type Selected	Emotional Register	Generated?	Passed Checklist?	Adjustment Made
Light	[E.G., Banter-Heavy Montage]	[E.G., Light intensity, light subtext]	[Yes / No]	[Yes / No]	[IF_YES_WHAT_CHANGED]

6.6.3 Decision Tree: Diagnosing a Calibration Miss

Step 1 – Which scene drifted?

- High-Tension → Proceed to Step 2a.
- Tender → Proceed to Step 2b.
- Light → Proceed to Step 2c.

Step 2a – High-Tension scene drift:

Symptom	Failing Parameter	Fix
Too flat, not enough edge	Intensity Range	One increment upward
Subtext is too visible, too quickly	Subtext Density	One increment heavier
The scene resolves too quickly	Pacing Curve	Add a slower build clause

Step 2b – Tender scene drift:

Symptom	Failing Parameter	Fix
Too intense, reads as melodrama	Intensity Range	One increment downward
The vulnerability feels stated rather than shaped	Subtext Density	Add a management clause
The pacing rushes the moment	Pacing Curve	Add a deceleration instruction

Step 2c – Light scene drift:

Symptom	Failing Parameter	Fix
Too heavy, reads as forced	Intensity Range	One increment downward
The humor carries hidden weight it shouldn't	Subtext Density	One increment lighter
The exchanges drag	Pacing Curve	Add a rapid-fire modifier

Make one adjustment at a time, and regenerate only the scene where the voice has drifted. Run the Reader Expectation Alignment checklist again, then confirm the fix. Once it checks out, move on to the next drift if one exists.

6.6.4 Verification Completion Standard

All boxes checked means your calibration is done.

- ☐ All three scenes generated successfully using the calibrated filter.
- ☐ All three scenes passed the five-question Reader Expectation Alignment checklist.
- ☐ The high-tension scene feels distinctly heavier than the tender scene.
- ☐ The tender scene feels distinctly more vulnerable than the light scene.
- ☐ The light scene feels distinctly more playful than the other two.
- ☐ All three scenes exist within the same genre-specific emotional contract.
- ☐ I have completed no more than two adjustment passes.

If all boxes check, lock the settings and move forward with your draft. Additional tweaking beyond two adjustment passes produces diminishing returns. You can refine further as you generate more scenes throughout your manuscript.
